

Key Instant Recall Facts

Year Five – Summer 2

I know the equivalent amounts in different measurements.

By the end of the half term, children should know the equivalent amounts in different measurements.

<p>Measurement facts:</p> <p>There are 100 cm in 1 m. There are 10 mm in 1 cm. There are 1000 m in a km. There are 1000 g in a kg. There are 1000 ml in 1 l. There are 60 seconds in a minute. There are 60 minutes in an hour. There are 7 days in a week. There are 12 months in a year. There are 365 days in a year (not leap where there are 366.) There are 100 pennies in a pound. There is 180° in a triangle. There is 360° in a circle.</p>	<p>How many grams in 3.4 kg?</p> <p>How many litres are equivalent to 5600 ml?</p> <p>How large is the third angle in a triangle if the other two are 30° and 40°?</p> <p>How many minutes in three hours?</p> <p>How many grams are equivalent to 5kg?</p>	<p>Put these in ascending order:</p> <p>3.5kg, 4000g, 9/10 of kg</p>
--	---	--

Children should be able to know the equivalent fraction as both a decimal and as a percentage.

Top Tips

The secret to success and putting these in your long term memory is working hard. To help do this, practise little and often. You don't need to practise them all at once: perhaps you could start with one particular fact and ensure they know all of them before moving onto another. Work one set of equivalent facts a day, as it breaks up the memorising.
